ABOUT US

Our recording studios for audio and music production are designed to meet our customers requirements to a high degree. Our modern, fully air-conditioned studios each consist of an acoustically optimized control room and recording room.

We have been able to produce demanding jobs for well-known clients in our studios.

Let us know your requirements using the contact form or by email and let`s talk about your audio production. Together we can find out how we can take your recording to the next level. Whether voice recordings, speaker mediation, e-learning, localization or text-to-speech projects - we are at your side with our many years of expertise in audio engineering and project management.

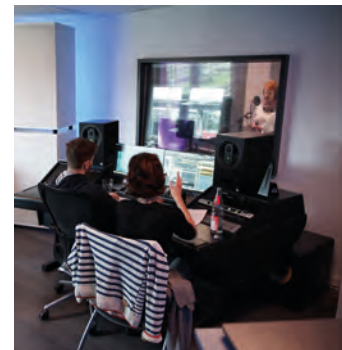

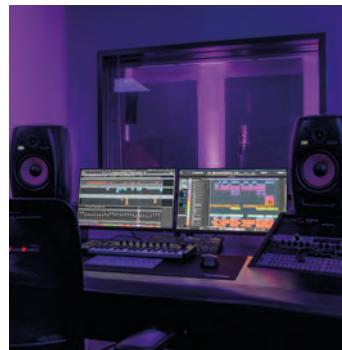

PORTFOLIO

- Talent Casting
- Project Management
- Sound Recording for Explanatory Films
- Subtitling
- Dubbing / Localization Image Films
- Games Localization
- E-Learning Dubbing
- Synchronization

- AI Voice Management & Editing & Mastering
- Podcast Creation
- Online Ads Dubbing & Creation
- Text-To-Speech (TTS) Projects
- Radio Commercials

IMPRESSIONS

STUDIO EFFICIENCY

1. Pre-Production

- Optimize script for clarity, timing, and lip-sync accuracy.
- Provide pronunciation guides, tone references, and style guidelines.
- Select experienced voice actors skilled in lip-sync and time-synced recordings.

2. Efficient Recording Process

- Active real-time monitoring and direction to ensure quality.
- Use timecode-based cues and waveform alignment tools for synchronization.
- Playback original video/audio to maintain accurate sync.
- Focus on retakes only for necessary lines to save time.

3. Technical Optimization

- Maintain consistent mic setups, pop filters, and controlled acoustics.
- Use standardized audio processing templates (EQ, compression, normalization).
- Implement sync tools in software like Nuendo for precise alignment.

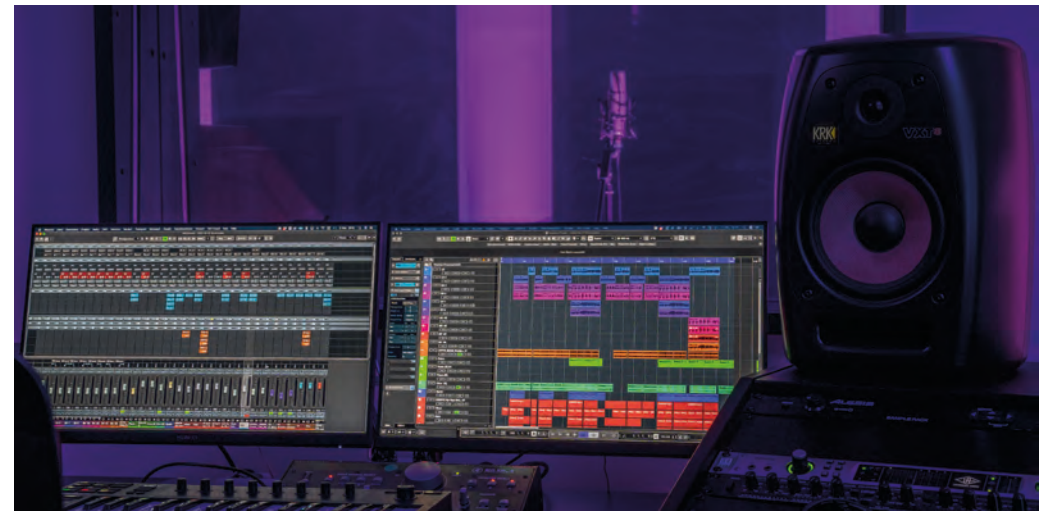

4. Post-Production & Quality Control

- Use DAWs like Pro Tools or Nuendo for fine-tuning.
- Cross-check voice tone, pacing, and pronunciation across sessions.
- Implement structured feedback loops and approval processes.

5. Team Coordination & Workflow Management

- Set clear production schedules with buffer time for revisions.
- Utilize parallel workflows to streamline recording and editing.
- Close collaboration between directors, engineers, and editors to minimize rework.
